13 / CLEANING & CARE

Keep your brushes at their best.

Careful cleaning helps preserve the shape and flexibility of brush hairs. This is especially important for natural-hair brushes, which can become brittle if product residue is left behind.

01

Before first use

A plant-based sizing agent holds the brush hairs in shape during transport. Rinse it out with warm water before using the brush for the first time.

02

Remove product residue

Use a suitable brush cleaner and regularly follow with mild soap or shampoo. Rinse thoroughly to remove residue, including around the ferrule.

03

Rinse and reshape

After rinsing thoroughly, gently smooth the hairs towards the tip and restore the brush head to its original shape.

04

Allow to dry gently

Allow the brush to dry slowly. Keeping the hairs clean and carefully reshaped helps them stay flexible and ready for use.
